

Surgical Technology

» southeast.edu

Surgical technology is a rapidly growing profession that is continuously evolving with new technology and surgical procedures. You will have a strong commitment to aseptic technique and graduate with an ingrained surgical conscience that ensures you are continuously focused on putting the needs of the patient first and providing the highest level of surgical patient care. You will be rewarded daily knowing you have made a difference in a patient's life.

- » The SCC Surgical Technology program is one of the only programs nationwide to have five full-time instructors and numerous adjuncts, allowing instructors to be present in the clinical site with our students when they are performing clinical rotations.
- » You will spend almost 600 hours in actual surgical procedures with real patients, which equates to approximately 150-200 cases performed during your clinical experience. You are required to achieve 120 cases per accreditation, but our clinical experience greatly exceeds this minimum.
- » SCC Surgical Technology program students have the ability to be hired prior to graduation and be paid during their clinical experience depending on each healthcare facility's policy.
- » SCC's Surgical Technology program is one of the only programs nationwide to be offered completely online with labs at approved locations and clinical experience completed in local hospitals, allowing communities to grow their own healthcare professionals.
- » The National Certification Exam will be administered through Applied Measurement Professionals Inc. before graduation. Upon verification of graduation by the program director, each student passing the exam will receive the official certification from the National Board of Surgical Technologists and Surgical Assistants.
